Are you maximizing your recovery dollars?

REVENUE LEAKAGE

Identify

IRIS™ (Intelligent Recovery Identification System) is used to process providers or payors claims for Revenue Leakage Identification. The proprietary IRIS™ system is comprised of algorithms and advanced analytics to cross reference the file against 50+ proprietary databases along with 20+ publicly available databases to identify claims with potential revenue return.

Recover

Results from IRIS™ are then used to provide focal light onto the recoverable claims. Priority is set based on Statue of Limitations in each state and claim's value. IRIS™ enables ERI to stop Revenue Leakage from your internal systems, external Third Part Liability Solutions, minimize false positives and shortens the time to recovery. IRIS™ works for historical validation projects and as a Day-1 TPL providing you a complete recovery solution.
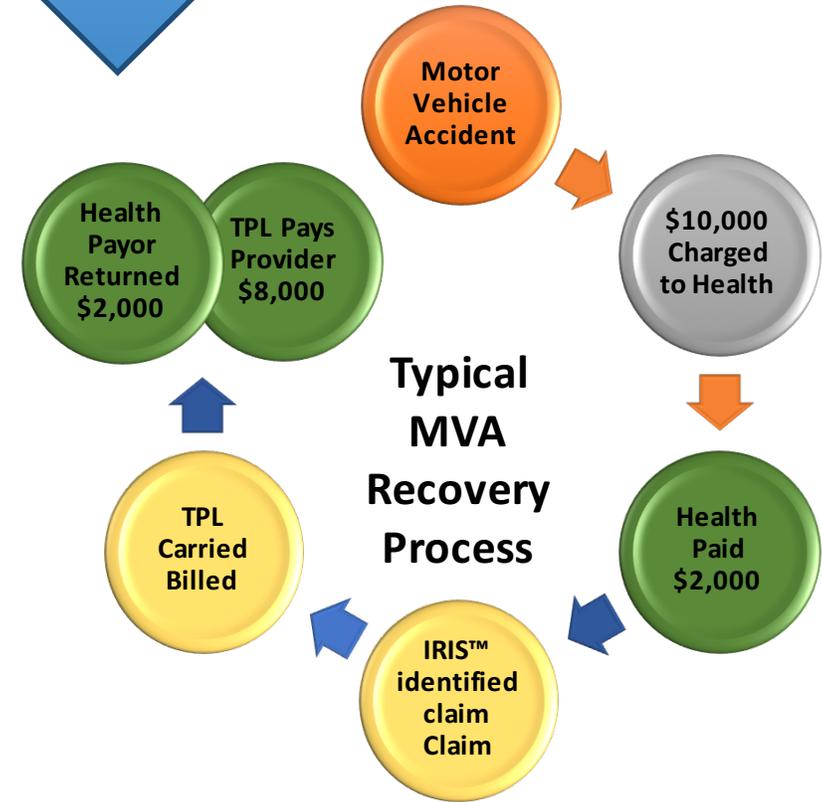

Report

Through interactive portals ERI provides enhanced reporting to provide pre-review estimated recovery statistics, final recovery amounts and real-time claim return statuses. The financial insight provided through our reporting is only one of the reporting benefits. ERI provides additional value via the transformation of the claims data into actionable items for their clients so you can see where your data and processes can be enhanced.

Identify Revenue Leakage

Wrong Insurance, Wrong Employer, Misidentified Coverage, Human Error, Unavailable Information
